Hi Shreeram

Please find the below assessment task

Assessment Task 2: Basic Automation Script

- **Objective**: To gauge the candidate's ability to automate tasks.
- **Task**: Create a script that monitors a folder for new files, and when a new file is added, automatically moves it to a specified destination folder.
    - **Requirements**:
        - Use Python's `os` and `shutil` libraries to monitor and move files.
        - Log each file transfer with the filename and timestamp.
        - Provide error handling for cases where the destination folder is inaccessible.
    - Note : Please avoid using chatgpt

Regards
Arif
